ROOM SPACE DESIGN
To have a play area (room-scale experience) of 3x3 meter, a minimum room space 4.5x4.5 meter is recommended:

- To get a better experience in an Arcade, a 3x3 meter play area is highly recommended. This size fulfills the requirement of most games (ex: room-escape).
- Most customers come to Arcade stores with friends and/or family. A place for multiple people to experience VIVE is recommended. A 4.5x4.5 meter play area could contain a PC, TV screen, chairs, and sofa.
- It is better to use speakers rather than headphones. This allows customers and their friends/family to hear and enjoy the experience together.
INSTALLING BASE STATION

Correctly mounting the base stations leads to better position tracking. The following is guidelines to install base stations:

- Position the base stations diagonally across the room and above your height.
- Make sure the maximum distance between two base stations is 5 meters.
- Every HMD can only see (at most) two base stations. The third base station might interfere with position tracking and cause loss of tracking. The tracking distance is around 5 meters, but laser signal might transit 8-10 meters.

- Avoid using any mirror material in decoration. Mirror would reflect laser signals and interfere with HMD tracking.
- In an arcade environment, we suggest use of light-shielding material as the partition between each play area. For example, a thick and light-blocking black cloth or a wooden/plywood board are good solutions.
3-in-1 CABLE HANGING STICK
To get a better experience and improve safety, it is highly recommended to hang the 3-1 cable with a stick. The best hanging position is behind the player. This helps taller customers avoid striking the stick especially while throwing something in virtual reality.

HYGIENE

Hygiene is very important for Arcade store, since equipment will be used by many different customers. It is recommended to prepare the following materials:

- **HTC VIVE Cover: PU Leather**
  Material PU Leather could avoid sweat absorption, and is easier to clean. Recommend to replace PU Leather with the original foam.

- **Disposable White Mask**
  Disposable white mask could avoid directly skin contact with HMD. Staff should deliver disposable white mask to every customer before experience VR.

- **Alcohol Cotton Wipes**
  Staff should clean HMD and Controllers between every customer session.
